

## Statistical Data Visualization With Seaborn

The Python visualization library Seaborn is based on matplotlib and provides a high-level interface for drawing attractive statistical graphics.

Make use of the following aliases to import the libraries:

```
>>> import matplotlib.pyplot as plt
>>> import seaborn as sns
```

The basic steps to creating plots with Seaborn are:

1. Prepare some data
2. Control figure aesthetics
3. Plot with Seaborn
4. Further customize your plot

```
>>> import matplotlib.pyplot as plt
>>> import seaborn as sns
>>> tips = sns.load_dataset("tips")
>>> sns.set_style("whitegrid")
>>> g = sns.lmplot(x="tip",
>>>               y="total_bill",
>>>               data=tips,
>>>               aspect=2)
>>> g = (g.set_axis_labels("Tip", "Total bill (USD)")).
>>> set(xlim=(0,10), ylim=(0,100))
>>> plt.title("title")
>>> plt.show()
```

## 1 Data

Also see [Lists, NumPy & Pandas](#)

```
>>> import pandas as pd
>>> import numpy as np
>>> uniform_data = np.random.rand(10, 12)
>>> data = pd.DataFrame({'x':np.arange(1,101),
>>>                      'y':np.random.normal(0,4,100)})
```

Seaborn also offers built-in data sets:

```
>>> titanic = sns.load_dataset("titanic")
>>> iris = sns.load_dataset("iris")
```

## 2 Figure Aesthetics

```
>>> f, ax = plt.subplots(figsize=(5,6)) Create a figure and one subplot
```

**Seaborn styles**

```
>>> sns.set()
>>> sns.set_style("whitegrid")
>>> sns.set_style("ticks",
>>>               {"tick.major.size":8,
>>>                "tick.major.size":8})
>>> sns.axes_style("whitegrid")
```

(Re)set the seaborn default  
Set the matplotlib parameters  
Set the matplotlib parameters  
  
Return a dict of params or use with  
with to temporarily set the style

## 3 Plotting With Seaborn

### Axis Grids

Subplot grid for plotting conditional relationships

```
>>> g = sns.FacetGrid(titanic,
>>>                   col="survived",
>>>                   row="sex")
>>> g = g.map(plt.hist, "age")
>>> sns.factorplot(x="pclass",
>>>               y="survived",
>>>               hue="sex",
>>>               data=titanic)
>>> sns.lmplot(x="sepal_width",
>>>            y="sepal_length",
>>>            hue="species",
>>>            data=iris)
```

Draw a categorical plot onto a Facetgrid

Plot data and regression model fits across a FacetGrid

### Categorical Plots

**Scatterplot**

```
>>> sns.stripplot(x="species",
>>>               y="petal_length",
>>>               data=iris)
>>> sns.swarmplot(x="species",
>>>               y="petal_length",
>>>               data=iris)
```

**Bar Chart**

```
>>> sns.barpplot(x="sex",
>>>               y="survived",
>>>               hue="class",
>>>               data=titanic)
```

**Count Plot**

```
>>> sns.countplot(x="deck",
>>>               data=titanic,
>>>               palette="Greens_d")
```

**Point Plot**

```
>>> sns.pointplot(x="class",
>>>               y="survived",
>>>               hue="sex",
>>>               data=titanic,
>>>               palette={"male":"g",
>>>                        "female":"m"},
>>>               markers=["^", "o"],
>>>               linestyle=["-", "--"])
>>> sns.boxplot(x="alive",
>>>               y="age",
>>>               hue="adult_male",
>>>               data=titanic)
>>> sns.boxplot(data=iris, orient="h")
```

**Violinplot**

```
>>> sns.violinplot(x="age",
>>>                 y="sex",
>>>                 hue="survived",
>>>                 data=titanic)
```

**Boxplot**

Boxplot with wide-form data

Violin plot

Also see [Matplotlib](#)

### Context Functions

```
>>> sns.set_context("talk")
>>> sns.set_context("notebook",
>>>                 font_scale=1.5,
>>>                 rc={"lines.linewidth":2.5})
```

Set context to "talk"  
Set context to "notebook",  
scale font elements and  
override param mapping

### Color Palette

```
>>> sns.set_palette("husl", 3)
>>> sns.color_palette("husl")
>>> flatui = ["#9b59b6", "#3498db", "#95a5a6", "#34495e", "#2ecc71"]
>>> sns.set_palette(flatui)
```

Define the color palette  
Use with to temporarily set palette  
Set your own color palette

```
>>> h = sns.PairGrid(iris)
>>> h = h.map(plt.scatter)
>>> sns.pairplot(iris)
>>> i = sns.JointGrid(x="x",
>>>                   y="y",
>>>                   data=data)
>>> i = i.plot(sns.regplot,
>>>            sns.distplot)
>>> sns.jointplot("sepal_length",
>>>               "sepal_width",
>>>               data=iris,
>>>               kind='kde')
```

Subplot grid for plotting pairwise relationships  
Plot pairwise bivariate distribution  
Grid for bivariate plot with univariate plots

Plot bivariate distribution

### Regression Plots

```
>>> sns.regplot(x="sepal_width",
>>>              y="sepal_length",
>>>              data=iris,
>>>              ax=ax)
```

Plot data and a linear regression model fit

### Distribution Plots

```
>>> plot = sns.distplot(data.Y,
>>>                     kde=False,
>>>                     color="b")
```

Plot univariate distribution

### Matrix Plots

```
>>> sns.heatmap(uniform_data, vmin=0, vmax=1)
```

Heatmap

## 4 Further Customizations

Also see [N](#)

### Axisgrid Objects

```
>>> g.despine(left=True)
>>> g.set_ylabels("Survived")
>>> g.set_xticklabels(rotation=45)
>>> g.set_axis_labels("Survived", "Sex")
>>> h.set(xlim=(0,5),
>>>       ylim=(0,5),
>>>       xticks=[0,2.5,5],
>>>       yticks=[0,2.5,5])
```

Remove left spine  
Set the labels of the y-axis  
Set the tick labels for the x-axis  
Set the axis labels  
Set the limit and ticks for x and y-axis

### Plot

```
>>> plt.title("A Title")
>>> plt.ylabel("Survived")
>>> plt.xlabel("Sex")
>>> plt.ylim(0,100)
>>> plt.xlim(0,10)
>>> plt.setp(ax, yticks=[0,5])
>>> plt.tight_layout()
```

Add plot title  
Adjust the label of the y-axis  
Adjust the label of the x-axis  
Adjust the limits of the y-axis  
Adjust the limits of the x-axis  
Adjust a plot property  
Adjust subplot params

## 5 Show or Save Plot

Also see [N](#)

```
>>> plt.show()
>>> plt.savefig("foo.png")
>>> plt.savefig("foo.png",
>>>             transparent=True)
```

Show the plot  
Save the plot as a file  
Save transparently

### Close & Clear

```
>>> plt.cla()
>>> plt.clf()
>>> plt.close()
```

Clear an axis  
Clear an entire figure  
Close a window
